ACKNOWLEDGEMENT

Project work, lays the foundation of student's career today. The satisfaction that comes with successful completion of task would be but incomplete without the mention of the people who made it possible. It gives us immense pleasure to acknowledge all those who have extended their valuable guidance and magnanimous help.

With a deep sense of gratitude, wish to express sincere thanks to my honorable guide Mrs. Diptii Bhatt who has the attitude and substance of a genius and has been a great source of inspiration throughout the project. I am fortunate to be given the opportunity of working under his. In spite of a tight schedule, he always found time for my difficulties and patiently answered to all my queries. He not only provided the necessary guidance and support, but also continuously motivated me to give my best in this advanced project. With sincere regard.

Padshala Zarana [3108]

PREFACE

With fast development of computer technologies, the software projects are growing and complexity. Software expert has recently sought in more systematic and formal approach, in the design, development and the implementation of their software. The new approach has become necessary because the traditional methods of system development often yielded software characterized by late diversity, costliness, unreliability, and non maintainability and non use ability.

In this new age of computing everthing has been computerized, so how can we become isolate and untouched from this environment. That's why keeping this thing in mind and an opportunity or probably a creativity to do such a task different and unique from others, we thought a way to develop this software.

This project has been developed in aim to aid and computerize an flight booking. While keeping in mind the user will find an easy and friendlier user friendly that any person can use it easily without having any computer experience.

INTRODUCTION

1.1 PURPOSE AND MOTIVATION

The Main purpose of this project and Document is to understand Venue finder and booking Project and Requirement. This is Document will help to collect and gather all requirements related to project. Any Admin and user can understand the Project flow so that they can easily manage complete website by viewing this documentation. We have learn PHP and Mysql Technology to create our project and then we have created various pages and done coding in php for backend and html for front end. In future we can also add various technology in this project.

1.2PROJECT OVERVIEW

Venue Finder and Booking is project will help various venue to show case their VenueDetails online show that any one can view details from website. Even Venue can also update various details from thier panel and update various events. In Short we have given access to Venue supplier to modify all the details from thier panel. User can search and view the details from website and User can search by various parameters to access Venue details.

1.2 PROJECT DESCRIPTION

In our System there are three main actors are there who are important to manage and run website. Admin can manage all data of the project and admin can view details of the various tables. Admin can manage the users who have registered in website and also Admin can manage the various Venue details from website.

Venue Owner can create account and admin will check details. Venue Owner can also manage the booking details of the user. Venue Owner can view the feedback details which is given by the user from website.

In our main objective is to get all venue details will be present in same so user can view the various venue details and search by various parameters. User can also book the venue from website and venue owner can view the details of venues.

1.4. Definitions, Acronyms, and Abbreviations

- Personal for signup :- Name, mobile, email and password
- Booking Details :- For Booking purpose information needs to provide by the user.
- WWW :- Word Wide Web
- XAMPP :- X Any os A Apache P PHP P Pearl
- Mysql :- Mysql is a Database will stores all information about our project.

Admin Side

Admin Login Page

A mockup of an admin login page. It features a teal header with the word "Login". Below the header is a white form with two input fields: "Enter Your Email" and "Password". The "Password" field has a lock icon. Below the email field is a checkbox labeled "Remember me" and a link "forgot password?". Below the password field is an orange "Sign in" button. At the bottom of the form is a link "Don't have an account? Create an account". In the bottom right corner of the page, there is a "Activate Windows" watermark with the text "Go to Settings to activate Windows."

Add Area

The image displays two screenshots of a web application titled "VENUE Online Booking". The interface includes a dark sidebar with navigation links: Dashboard, Components, Examples, Important, Warning, and Information. The main content area is titled "Area form" and contains a form for adding venue information.

Top Screenshot: The form is titled "add venue information:". It features a text input field labeled "area_name" with the placeholder text "Enter area name:". Below the input field are three buttons: "ADD" (blue), "RESET" (red), and "VIEW" (teal). The footer of the page includes the copyright notice "© 2018 Glance Design Dashboard. All Rights Reserved | Design by w3layouts" and a watermark "Activate Windows. Go to Settings to activate Windows."

Bottom Screenshot: This screenshot is identical to the top one, but the "area_name" input field now contains the text "Kakipur".
